

Energy & Environmental

Green energy, waste management, and environmental compliance.

Some of the largest and most prestigious companies doing business in Arkansas, along with government entities and individuals, have relied on us for guidance and representation in environmental matters involving transactions, litigation, and administrative hearings. In addition, we advise our clients regarding environmental business and tax incentives and strategies for adapting to and thriving in an increasingly "green" business and regulatory environment.

We are called upon to represent our clients' interests before the Arkansas Public Service Commission and the Arkansas Oil and Gas Commission, in federal and state courts, before federal and state agencies, and before the Arkansas Legislature.
